PoHan (Kozak) Hou | UTokyo PhD Student in Nuclear Fusion Program

SERVER ANT · AI-NATIVE ENERGY SYSTEMS ENGINEERING

Engineering the Energy Frontier.

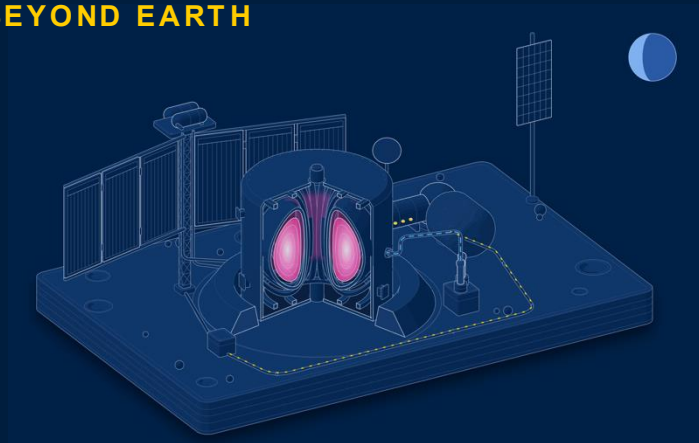

AI-native engineering for next-generation energy systems.

FUSION ON EARTH

TST-2 spherical tokamak, UTokyo

ENERGY BEYOND EARTH

Power for lunar bases and extreme environments

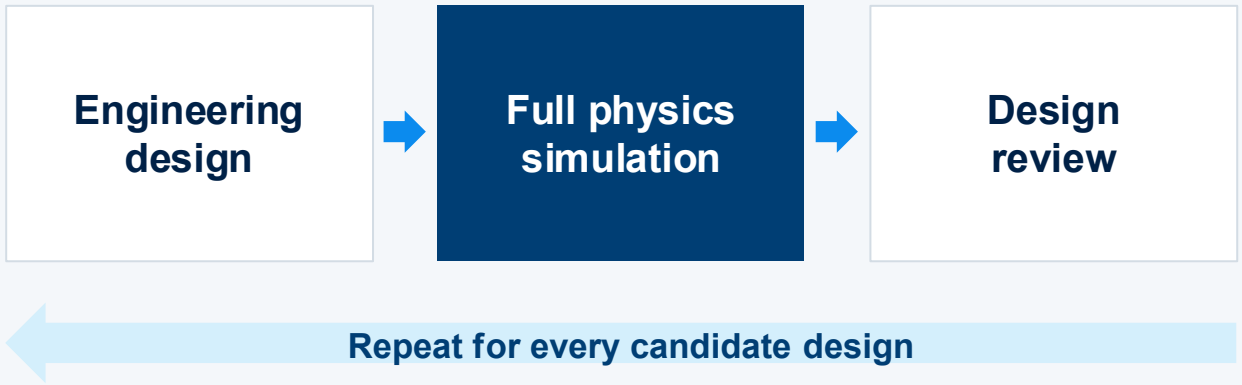

Long-term frontier

STARTING WITH FUSION RF ENGINEERING Audited heating design studies for fusion developers

Fusion has a decision bottleneck.

Every heating-design comparison means another expensive physics run.

TODAY'S DESIGN LOOP

Repeated HPC runs and specialist hours across design iterations

01 **EXPENSIVE SIMULATIONS**
Full-wave RF codes cost HPC time and experts

02 **REPEATED DESIGN ITERATIONS**
Every option means solving the physics again

03 **UNVERIFIED AI PREDICTIONS**
Fast surrogates can still break physical limits

FIRST CUSTOMERS Fusion developers and RF engineering teams

AI for speed. Physics for trust.

Not another AI model: better decisions, built on the tools engineers already trust.

01
EXPLORE
Engineering design candidates

02
ACCELERATE
AI surrogate models screen options in seconds

OUR DIFFERENCE
03
VERIFY
High-fidelity physics solvers check the critical results

04
DECIDE
Audited engineering recommendations

Built to benefit from advances in AI and physics solvers, with verification at every step.

FIRST COMMERCIAL OFFER **Audited RF Heating Design Study**

Fixed-fee engineering studies for fusion developers · pricing to be validated

Billions are moving into fusion.

We start with RF engineering, expand into whole energy systems, then space.

$4.48B

raised by fusion companies in the year to July 2026

£2.5B+

UK government fusion commitment over five years

OUR GROWTH ROUTE

01 Fusion RF
Initial engineering customers

02 Integrated energy systems
RF, electrical and thermal co-design

03 Space energy engineering
Long-term frontier

OUR BUSINESS MODEL Engineering studies → Enterprise software → Integrated energy systems

Funding shows momentum, not Server Ant's addressable market. Sources: FIA, Global Fusion Industry 2026; UK Gov (Jun 2025).

Built on proven research.

I've accelerated simulations by orders of magnitude. Now I'm turning that capability into trusted engineering decisions.

~2,000×

Industrial simulation acceleration

Moldex3D, production API, <3% error

282×

RF-wave inference speed-up

Lower-hybrid waves, MSc; 26× in TST-2 geometry

0.95 R^2

AORSA1D surrogate, PhD

Majority-ion power, held-out cases

FOUNDER PATH

SPACE SCIENCE
National Central University, BS

⬇

COMPUTATIONAL ENGINEERING
Imperial College London, MS

⬇

NUCLEAR FUSION
University of Tokyo, PhD

ALSO 3rd of 254 teams, NeurIPS 2024 ML4CFD · Contributor, Google DeepMind fusion-surrogates

NOW **Developing AORSA surrogates in my PhD.**

Founder's academic and prior technical results. Server Ant has not yet completed a commercial pilot.

From research to business: why the UK.

J-StarX UK is where I aim to turn proven research into a commercially validated business.

01

FIND BUYERS

UK fusion developers and engineering customers

02

VALIDATE THE PRODUCT

Industry interviews and design partners

03

LAUNCH A PILOT

A clear pathway to the first paid engagement

JAPAN–UK FIT Builds on the UK–Japan fusion MoC (2025) and the UKAEA–QST MoC (2026)

Fusion is our proving ground.
Space is our frontier.
